# **PAVISTONE 1K AROM**

## Aromatic polyurethane binder

### **DESCRIPTION AND APPLICATIONS**

Pavistone 1k Arom is a polyurethane aggregate binder for pavements that gives for a smooth floor, modern, tough, low maintenance, porous or semi porous finish, depending on the type of aggregates used.

The surface finish is a seamless, flexible and resistant to cracking floor.

### **APPLICATIONS**

- Paths
- Parking decks
- Bike lanes
- Fences
- Ramps
- Pedestrian areas
- Parks Commercial areas
- Roads
- Footbridges
  - Residential areas

### **TECHNICAL DATA**

INFORMATION ON THE PRODUCT BEFORE APPLICATION		
Chemical description Solventless aromatic polyisocyanate		
Physical state	Liquid	
Packaging	Metal container	
	5kg	
	25 kg	
Non-volatile content	100%	
(%)		
Flash point	100°C	
Colour	Whitish	
Density		

Temp (°C)	Density
	(g/cm3)
23	1.12

Visc	cos	itv

approximate Brookfield

Temp (°C)	Viscosity ()
15	2680
20	1940
25	1500

### Pot lifeapproximate

Conditions (100g filter+5g resin)	Pot life(min)
20°C, 40% hr	90-120

Storage	Keep between 10° y 30°C, protected from	
	moisture.	
Use before	12 months after manufacturing date.	

INFORMATION ON THE FINAL PRODUCT	
Final state	Elastomeric solid binder
Colour	Colourless
Solid density	1,10-1,15 g/cm3 g/cm3
Hardness (shore)	50D
Mechanical	Elongation at break: 30%
properties	Tensile strength: 25
UV resistance	Colour stable under sunlight
Water absorption	Very low (6 days, 20°C)
Chemical	Surface contact (24 hours, room temperatur, 5=ok, 0=
resistance	not recommended)

White Spirit         5           Coffee         5           Isopropyl alcohol         5           Methoxypropyl         5           acetate         5           Petrol/gasoline         5           Xylene         5           Sodium hydroxide         5           (saturate)         5           Ethanol         4           Bleach         5           Trichloroisocyanuric         5           acid         5           Formaline         5           Lubricant oil         5           Hydrogen peroxide         4           Acetic acid (10%)         2           Sulphuric Acid (30%)         1           Skydrol         5           Ammonia (3%)         5           Diesel         5	Chemical	Result

### SUPPORT REQUIREMENTS

In order to achieve a good bonding, support must be:

- 1. Flat and levelled
- 2. Coct and cohesive (pull off test must show a minimum resistance of 1,5 N/mm2).
- 3. Even and regular surface
- 4. Free from cracks and fissures. If any, they must be previously repaired.
- 5. Clean and dry, free of dust, loose particles, oils, organic residues or laitance.

Asphalt supports must be clean and dry. For more information on treatment of critical spots, consult our technical service.

Edges of the application can be finished with brick, stone, concrete, for a high quality finish.

### RECOMMENDED AMBIENTAL CONDITIONS

Support temperature should be between 10°C and 25°C. At higher temperatures, specific precautionary measures must be taken. At lower temperatures, curing is very slow. Please follow manufacturer advice. Support moisture should be less than 4%.

High temperature and moisture conditions can lead to bubbling/foaming. Preferred air conditions are 10-30°C and 30-80% rh

### **RECOMMENDED COMBINATIONS**

Aggregate/Pavistone 1k Arom ratio is as follws

Aggregate type	Pavistone % (A+B)
Regular, smooth, big stone	3 to 5%
Small particles, porous, irregular	5 to 7%
sizes	

An advisable practice is to seal the upper surface with a thin coat of pure Floortop 1k resin in order to prevent surface wearing off

KRYPTON CHEMICAL SL C/ Martí i Franquès, 12 - Pol. Ind. les Tàpies

# **PAVISTONE 1K AROM**

### Aromatic polyurethane binder

Homogeneize completely by gentle stirring before use. After mixing, Pavistone 1k Arom is added to the aggregate mass, using a sutable mechanical mixer. Mix for 2 minutes and spread immediately on the application site. It is important to wet throughly all the solids for the same length of time each batch in order to prevent colour differences. See pot life data for

Spread evenly at the desired thickness on the surface using a flat spreader and press gently to obtain a smooth and coct surface.

Use the following table as a guide for consumption estimations.

Agregate	Desired pavement thickness (mm)	Pavistone + stone consumption kg/m2
	15	30
6 to 10 mm	20	40
	25	50
	30	60

Some aggregates contain a certain proportion of finer sands that iir adhesion of the main components. Use clean materials with suitable particle distribution

### **APPLICATION**

Apply by spreader.

Use of up to 4% of thickening additive is possible for vertical application. Please refer to the Thickening Additive data sheet.

It is advisable to apply a final sealing topcoat made with the same (diluted) resin or colodur. It is important to prevent excess of sealing product since it will be readily absorbed and will give foamed and discoloured spots.

#### **CURING TIME**

Curing time depends strongly on the local conditions. Curing speed will increase with temperature and humidity. The following table gives approximate values for combinations 100 g filler/5 g resin, forming 4 cm thick pieces... Thicker coats will give longer curing times.

Conditions	Touch dry (h)	Total (h)
35°C, 25% rh	5-7	18-24

### **RETURN TO SERVICE**

Under most conditions, light traffic is permitted about 24 to 48 hours after curing.

### **TOOL CLEANING**

Pavistone 1k Arom can be cleaned with solvent Rayston. Stains must be cleaned as soon as possible. Hardened product cannot be dissolved.

Pavistone 1k Arom contains isocyanates. Always follow the instructions provided in the material safety data sheet and take the precautions described there. As a general rule, a suiable ventilation must be ensured and all contact with skin prevented.. This product is intended to be used only for the uses and in the way here described. This product is to be used only by industrial or professional users. It is not suitable for DIY-type uses.

### **ENVIRONMENTAL PRECAUTIONS**

Empty containers must be handled taking the same precautions as if they were full. Containers must be considered as hazardous waste, to be transferred to an authorized waste manager. If there is some residual product in the containers, component A and B can be mixed, always according to the A/B ratio, and allowed to cure. Do not mix volumes bigger than 5 litres in order to prevent dangerous reactions.

### **OTHER INFORMATION**

The information contained in this DATA SHEET, as well as our advice, both written as verbal or provided through testing, are based on our experience, and they do not constitute any product guarantee for the installer, who must consider them as simple information.

We recommend to study deeply all information provided before proceeding to the use or application of any of our products, and strongly advise to conduct tests "on-site" in order to determine their convenience for a specific project

Our recommendations do not exempt of the obligation of installers to deeply study the right application method for these systems before use, as well as to conduct as many preliminary tests as possible should any doubt arise. The application, use and processing of our products are beyond our control, and

KRYPTON CHEMICAL SL
