POLYUREA F

DESCRIPTION AND APPLICATION

Polyurea F is a 2-component polyurea resin, which cures very fast into an elastic membrane with crack-bridging capacity. This product can only be applied by 2component spraying equipment. Polyurea F can be combined with different geotextiles to obtain on-site applied, seamless liners (Rayston Spray liners)

APPLICATIONS

Waterproofing of concrete structures and light traffic areas. Polyurea F can be completed with an additional UV-resistant coating. Roof waterproofing. Geomembrane lining for retntion basins and secondary containment structures, ponds, lanfills, tunnels, canals, dam reparations, etc

PROPERTIES

Crack bridging ability. Highly elastic membrane, fully contiuous. Very fast curing with application by hot spraying equipment for two components. Improved fire resistance cored to a conventional polyurea. Non-combustible according to UNE 53-127: 2002 standard. Pigmentable.

CERTIFICATIONS

AITEX. Mechanicalproperties EN ISO 527-1/3, Punching / CBR accordingto UNE-EN ISO 12236:2007, Tear, accordingto UNE-EN ISO 34-1:2011

aitex

TECHNICAL DATA

PRODUCT INFORMATION BEFORE APPLICATION			
	Component A	Component B	
Chemical description	Polyol/Polyamine	Aromatic isocyanate prepolymer	
Physicalstate	Liquid	Liquid	
Packaging	Metal container 191 kg (Pigment supplied separately) 23.8 kg	Metal container 205 kg 25.6 kg	
Non- volatilecontent (%)	approx 100%	100%	
Flash point	>100°C	>100°C	
Colour	Dark yellow (pigment is supplied separately)	Slightlyyellow	
Doneity			

Density

Temp	Density	Temp	Density
(ºC)	(g/cm3)	(ºC)	(q/cm3)

SUPPORT REQUIREMENTS

In order to achieve a good penetration and bonding, support must be:

1.Flat and levelled

2. Coct and cohesive (pull off test must show a minimum resistance of 1,4 N/mm2).

3. Even and regular surface

4. Free from cracks and fissures. If any, they must be previously repaired.

5. Clean and dry, free of dust, loose particles, oils, organic residues or laitance.

SUPPORT PREPARATION

Concrete substrates must be prepared mechanically using high pressure sand or abrasion, in order to remove the surface and obtain an open pore. Substrates must be primed and levelled until a regular surface is obtained. Sharp irregularities are eliminated using an abrading disc machine.

 Elim inate all dust and loose particles from the substrate by brushing or vacuum cleaning.

RECOMMENDED ENVIRONMENTAL CONDITIONS

Stir and disperse the Pigment Paste PU water-based before addition. For a homogeneous mixture, it is recommended to add a small quantity of the Component A of Colodur ECO/Colodur ECO Matt to the Pigment Paste PU water-based, mixing for some minutes and transfer to the original Component A container, thus reducing pigment loss. Add Component B afterwards and mix and apply in the usual manner.

Stir and disperse the combined mixture often during application in order to ensure colour stability.

POLYUREA F

Sprayed, hot-applied polyurea waterproofing membrane

MIXING

Stir and homogeneize separately both components using suitable mixing equipment before being loaded into the machine. Add the required pigment to the A-component and stir before loading. Recirculate both components while heating up to the required application temperatures

APPLICATION GUIDELINES

Polyurea F must be applied using a 2-component hot spraying equipment. Recommended temperatures are:

- Component A: 60°C
- Component B: 70°C

Pressure should be 150 bar. During application, check layer thickness and curing speed.

Spray Polyurea F at 2 kg/m2 as a general rule.

Wind speeds in excess of 25 km/h may result in excessive loss of exotherm and interfere with the mixing efficiency of the spray gun affecting polyurea surface texture, cure, and physical properties and will cause overspray issues.

Contact Krypton Chemical for more detailed technical information.

CURING TIME

Polyurea F cures to touch after a few minutes after application.

Approximate hardness values are provided as reference only (1 mm, polypropylene support, 25°C 50% RH).

Time	Hardness Shore A
2 hours	43
5 hours	49
1 day	51
6 days	54

RE-APPLICATION

Usually, needed thickness can be obtaines in one single coat. If necessary, a second coat can be applied immediately afterwards.

RETURN TO SERVICE

Under most usual conditions (25°C, 50% rh), the membrane is resistant to rain droplets after 15 minures, and able to resist light pedestrian traffic in 1 hour. After 2 days, 90% of the final properties are reached.

TOOL CLEANING

Solvent use for machine component cleaning is discouraged. A cleaning plasticizer fluid is suitable. Component B must be completely removed from all air-exposed parts and replaced with cleaning fluid.

QUESTIONS

Problem	Question	Cause	Solution
productdoesno t cure	AB ratio iscorrect?	Pressurediffe rences	Check and correct machine operation
Bubblesor open pores	Poroussupport?	No primer	Apply suitable primer before Polyurea F
No hidingpower	Horizontal?	Too little product Too little pigment	Apply 1 kg/m2 Ensure full A+pigmenthomoge neization
Colourchange	Exposed to sunlight?	UV-reaction	Use a last coat in dark grey or red
	Can it be applied without pigmentation?		Not recommended. Polyurea F is always delivered with the pigment of choice. Use of pigment helps to obtain an uniform appearance.

CLEANING AND MAINTENANCE

A maintenance work must be carried out regulary on the treated roofs according to the intended use.

This work includes the following tasks:

- Leaf removal
- Grass, dirt, moss and other vegetation removal
- Keeping storm water system in good working order.
 Ensure gratings are in place, in order to prove author output of the provest author obst
- Ensure gratings are in place, in order to prevent gutter obstructions.
 Check proper condition of several structures (flashing, seams, retaining walls...)
- Verification of possible damages due to improper use.

If aesthetic appearance of the roof is an important issue, it is essential to regularly clean the surface with water (some mild detergent may be added), according to the use.

It may be necessary to reapply decorative layers (Impertrans, Colodur) if they are worn out due to traffic, weather, corrosion, etc.

For stain removal, a surface treatment with Rayston solvent or isopropyl alcohol may be attempted. Strong acids are totally inadequate. Some solvents may damage the membrane. If this happens, the affected area has to be cut and repaired with a new Polyurea F or Impermax application.

SAFETY

Component B contains isocyanates. Always follow the safety instructions in the Material Safety Data Sheet. As a general rule, a good ventilation and/or respiratory protection is needed (combined organic vapor filtres+particles) along with protective clothing. This product must be used only for the applications here described. This product is intended for industrial and professional use. It is not suitable for DIY-type applications.

ENVIRONMENTAL PRECAUTIONS

Empty containers must be handled with the same precautions as if they were full. Treat empty containers as hazardous waste, and transfer them to an authorized waste manager. If the containes still have some material left, do not mix with other product with no knowledge of potential dangerous reactions. Component A and B may be mixed on a 1/1 ratio in order to get an inert material, but never do it in volumes larger than 5 litres in order to prevent a dangerous heat evolution

OTHER INFORMATION

The information contained in this Technical Data Sheet, as well as our advice, both written as verbal or provided through testing, are based on our experience, and they do not constitute any product guarantee for the installer, who must consider them as simple information.

We recommend to study deeply all information provided before proceeding to the use or application of any of our products, and strongly advise to conduct tests "on-site" in order to determine their convenience for a specific project.

Our recommendations do not exempt of the obligation of installers to deeply study the right application method for these systems before use, as well as to conduct as many preliminary tests as possible should any doubt arise. The application, use and processing of our products are beyond our control, and therefore under the exclusive responsibility of the installer. In consequence, the installer will be the only responsible of any damage derived from the partial or total in-observation of our indications, and in general, of the inappropriate use or application of these materials.

This data sheet supersedes previous all versions
